Q1. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q2. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q3. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q4. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q5. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q6. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q7. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q8. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q9. How do you create a basic Express.js server?

Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));

Q10. What is the purpose of 'app.use()'?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q11. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q12. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q13. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q14. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q15. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q16. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q17. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q18. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q19. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q20. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q21. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q22. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q23. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q24. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q25. What is the purpose of 'app.use()'?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q26. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for

building single-page, multi-page, and hybrid web applications.

Q27. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q28. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q29. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q30. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q31. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q32. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q33. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q34. How do you create a basic Express.js server?

Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));

Q35. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q36. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q37. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q38. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q39. How do you create a basic Express.js server?

Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));

Q40. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q41. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q42. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q43. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q44. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q45. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q46. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q47. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q48. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q49. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q50. What is the purpose of 'app.use()'?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q51. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for

building single-page, multi-page, and hybrid web applications.

Q52. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q53. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q54. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q55. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q56. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q57. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q58. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q59. How do you create a basic Express.js server?

Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));

Q60. What is the purpose of 'app.use()'?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q61. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q62. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q63. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q64. How do you create a basic Express.js server?

Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));

Q65. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q66. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q67. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q68. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q69. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q70. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q71. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q72. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q73. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q74. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q75. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q76. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for

building single-page, multi-page, and hybrid web applications.

Q77. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q78. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q79. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q80. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q81. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q82. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q83. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q84. How do you create a basic Express.js server?

Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));

Q85. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q86. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q87. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q88. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q89. How do you create a basic Express.js server?

Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));

Q90. What is the purpose of 'app.use()'?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q91. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q92. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q93. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q94. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q95. What is the purpose of `app.use()`?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.

Q96. What is Express.js?

Ans: Express.js is a minimal and flexible Node.js web application framework that provides a robust set of features for building single-page, multi-page, and hybrid web applications.

Q97. How do you install Express.js?

Ans: You can install Express.js using npm with the command: npm install express.

Q98. What are middleware functions in Express.js?

Ans: Middleware functions are functions that have access to the request object (req), the response object (res), and the next middleware function in the applications request-response cycle.

Q99. How do you create a basic Express.js server?

```
Ans: You can create a server using:

const express = require('express');

const app = express();

app.listen(3000, () => console.log('Server running'));
```

Q100. What is the purpose of 'app.use()'?

Ans: `app.use()` is used to mount middleware functions at a specified path. It is executed for every request to the app.
